## The EurObserv'ER project

The EurObserv'ER Barometers monitor the renewable energy progress in each Member State of the European Union. Every two months a barometer dedicated to one particular renewable energy technology is published. Moreover, once a year a EurObserv'ER Overview Barometer<sup>1</sup> collects the main indicators published during the year and completes these with additional renewable sectors which have not been detailed in the individual Barometers. Finally, the Overview Barometer also reports on socio-economic aspects: employment and turnover in the field of renewables, and the renewable energy investment climate. The country policy reports monitor policy developments by providing an overview of policy changes compared to the Member State Progress Reports.

All Barometers are available for download at <http://www.eurobserv-er.org>. An overview of direct links to Barometers is available in Annex A.

New Barometer releases are announced on Twitter ([https://twitter.com/eurobserv\\_er](https://twitter.com/eurobserv_er)).

Co-funded by the Intelligent Energy Europe  
Programme of the European Union

The EurObserv'ER barometer is a project supported by the European Commission within the DG Energy "Intelligent Energy Europe" programme. It is also supported by Ademe, the French Environment and Energy management Agency, and Caisse des Dépôts.

The sole responsibility for the content of this publication lies with the authors. It does not necessarily reflect the opinion of the European Union. Neither the EASME nor the European Commission are responsible for any use that may be made of the information contained therein.

## Abstract

According to the Directive 2009/28/EC of the European Parliament and of the European Council on the promotion of the use of energy from renewable sources the target for the share of energy from renewable sources in gross final energy consumption in the year 2020 for Poland is 15%, whereas in 2012 it reached 11,1%.

Poland promotes renewable electricity through a quota system, tax relief and subsidies, as well as loans. There are three subsidy models and a loan scheme, which support heat generated from renewable energy sources. In dimension to transport renewable energy is promoted primarily by biofuels.

The Republic of Poland established two programmes for renewable energy plants: a training programme, which is dedicated to installers in RES sector and certification system pertaining solar thermal installations.

This report monitors the policy changes after the release of the 2013 Progress Report for Poland and is regularly updated.

## Abbreviations

BTL	Biomass-to-Liquids
CHP	Combined heat and power plant
EEAG	Environmental and energy aid guidelines
EU-27	European Union, 27 Member States (excludes Croatia)
EU-28	European Union, 28 Member States (includes Croatia)
FiP	Feed-in premium (scheme)
FiT	Feed-in tariff (scheme)
GHG	Greenhouse gas(es)
GHG	Greenhouse gas
ktoe	Kiloton oil equivalent
MSW	Municipal solid waste
NREAP	National Renewable Energy Action Plan
PV	Photovoltaic energy
RE	Renewable energy
RED	Renewable Energy Directive
RES	Renewable energy sources
RMSW	Renewable Municipal solid waste (renewable fraction in MSW)
RQS	Renewable quota scheme
TSO	Transmission system operator

## Renewable energy mix and 2020 target

In the year 2012, Poland produced 5747 ktoe of solid biomass energy, which accounted for 7.7% of Polish contribution to the European Union. Solid biomass was therefore main RES in Poland. Biofuels took the second place with 823 ktoe of energy production, which means 7.0% of contribution to the EU-27. Third of the main renewable energy contributors in Poland was wind power with 388 ktoe, which equalled to 2.3% of the European energy production. Poland also produces minimal amount of solar energy through PV systems and does not generate any ocean energy so far. Source: EurObserv'ER, 2014, [www.eurobserv-er.org](http://www.eurobserv-er.org). The 2012 share of renewable energy in Poland amounted to 11.1%; the target for 2020 has been defined as 15% (source: EurObserv'ER report 'The State of Renewable Energies in Europe'<sup>2</sup>).

**Table** Renewable energy production in the 27 Member States of the European Union (EU-27) and the corresponding figures for Poland. Data have been expressed in ktoe and refer to the year 2012

[ktoe, 2012]	European Union (27 countries)	Poland	Contribution of Poland to EU-27
Hydro*	29408	206	0.7%
Wind*	17089	388	2.3%
Solar PV	5732	0	0.0%
Solar thermal**	2116	12	0.6%
Solid Biomass***	74804	5747	7.7%
Biogas	6212	134	2.2%
MSW****	4426	32	0.7%
Geothermal	7825	22	0.3%
Biofuels	11711	823	7.0%
Ocean energy	44	0	0.0%

\* Normalised electricity generation

\*\* Including electricity generation from Concentrated Solar Power

\*\*\* Including liquid biomass

\*\*\*\* Municipal Solid Waste only regards the renewable fraction in the waste

## Recent RES Policy Developments

The current EurObserv'ER policy profile is listing recent policy changes in the EU Member States. Starting point for this monitoring is the situation as it has been described in the country's Progress Report (which were due end of 2013). All Renewable Energy Progress Reports are available in English language from [www.eurobserv-er.org](http://www.eurobserv-er.org) (translated versions).

<b>Date</b>	<b>Technology</b>	<b>Policy change</b>
September 2013	General	The amendment to the Polish Energy Law colloquially referred to as the "Little Energy Three-Pack" came into force.
April 2014	General	The European Commission released the Progress Report for the Poland in April 2014. See Section 2 (page 7) to Section 4 (page 20) for a description of policy measures and support schemes.
May 2014	General	Announcement of the application process for the RES subsidy programme Prosument referring to local government units.
July 2014	General	Announcement of the application process for the RES subsidy programme Prosument referring to Voivodeship Funds for Environmental Protection and Water Management. New call will be announced in 2015.
March 2015	General	An Act to support Polish renewable energy production signed by the President Auctioning system for bigger RES FIT for small scale producers with a capacity of up to 40 kW. In force from 1st January 2016.

Note to the reader: the above overview has been compiled with care. However, in case you miss recent developments please be invited to inform EurObserv'ER on policy changes in a Member State. For communication use e-mail ([policy@eurobserv-er.org](mailto:policy@eurobserv-er.org)) or Twitter ([https://twitter.com/eurobserv\\_er](https://twitter.com/eurobserv_er)).

## Glossary

Auctions for granting renewable energy support	An auction is a process, organised by a governmental renewable energy implementation agency, of granting production or investment support to a specified volume of eligible renewable energy (or renewable energy generation capacity) based on the lowest bids per unit of renewable energy (or renewable energy generation capacity) by eligible renewable project developers.
Degression rate	See under 'Sliding feed-in tariff'
Feed-in tariff (FiT)	A technology-specific support scheme which provides for a technology-specific remuneration per unit of renewable energy payable to eligible renewable energy producers, typically for a period of 10-20 years. The FiT level is set <i>ex ante</i> by the National Regulatory Agency (NRA). It is to cover all future production costs including a <i>normal</i> rate of return to capital invested. In many schemes priority network access is offered to eligible renewable electricity generators, whilst a designated third party - e.g. the transmission or distribution network operator concerned - is being mandated to pay the FiT remuneration due. A proper, periodic review of FiT rates is often undertaken with the aim to prevent both too high FiTs so as to minimise regulatory rents, i.e. supra-normal returns and too low FiTs to preclude below-target market uptake because of FiT levels that are perceived by market participants to be less attractive.
Feed-in premium (FiP)	A technology-specific support scheme which provides for a technology-specific subsidy level per unit of renewable energy to eligible renewable energy producers, typically for a period of 10-20 years, at a pre-set fixed or floating (see under 'Floating FiP') rate, projected by the National Regulatory Agency (NRA) to enable renewable energy generation investments deemed commercially attractive by project developers without yielding supra-normal profits.
Floating FiP	A feed-in premium, which is periodically adjusted to exactly offset the change in the average energy wholesale market price, based on a pre-specified benchmark market price. A floating FiP may move freely or may only be allowed to move within a pre-set interval.
Grants	Grants are non-repayable funds disbursed by one party (grant makers), often a government department, corporation, foundation or trust, to a recipient, often (but not always) a non-profit entity, educational institution, business or an individual. (Source: Wikipedia.org)
Green public procurement	In Green public procurement contracting authorities take environmental issues into account when tendering for goods or services. The goal is to reduce the impact of the procurement on human health and the environment. (Source: Wikipedia.org)

NRA	National Regulatory Agency
Renewable quota scheme (RQS)	A renewable quota scheme mandates certain market actors (typically retail suppliers or large energy end-users) to respect a pre-set minimum share or amount of their total energy procurements from renewable sources of energy. Typically a tradable green certificate (TGC) scheme is operated to enable the obligated parties to prove their compliance with the prevailing renewable quota target by means of TGCs. Typically the renewable quota target is increased gradually over time. Renewable quota systems are also known under terms such as quota (obligation) schemes or renewable portfolio standards.
Request for tenders (RFT)	A request for tenders (RFT) is a formal, structured invitation to suppliers, to bid, to supply products or services. In the public sector an official fee is needed to fortify and secure the tender bid engagement/win documents, such a process may be required and determined in detail by law to ensure that such competition for the use of public is open, fair and free from bribery and nepotism. For example, a government may put a certain level of MW of offshore wind energy at a pre-defined location 'out to tender'; that is, publish an invitation for other parties to make a proposal for the construction of offshore wind farms, on the understanding that any competition for the relevant government contract must be conducted in response to the tender, no parties having the unfair advantage of separate, prior, closed-door negotiations for the contract. An evaluation team will go through the tenders and decide who will get the contract. (source: adapted from Wikipedia.org)
RD&D funding	The funding of research, development and demonstration activities and programmes. For technologies far remote from commercial maturity, government grants or subsidies might be considered. For technologies close to commercial maturity which are not taken up for commercial research any way, instruments such as fiscal instruments (tax credits, accelerated depreciation, etc.) and public-private partnerships may be considered, based on shared public and private RD&D funding.
Sliding feed-in-tariff	A FIT scheme which pre-sets technology-specific declining feed-in tariffs for certain prospective vintages in line with the technology-specific learning curve, as projected by the National Regulatory Agency (NRA). Often a degression rate is used indicating the %/annum decrease in the rate level.
Soft loans	Loans at concessional (below market-based) terms, for example at sub-market-conform interest rates, made available in several Member States to stimulate certain renewable energy technologies.
Tax credits	These are amounts a tax paying entity is allowed to deduct when declaring payable taxes, for example company tax or income tax, to the tax authorities, for example the producer tax credits (PTCs) used in the United States to stimulate among others wind energy deployment.
Tenders	See 'Request for tenders'
